Various specific services are available to assist manufacturing companies and supporting service industries: maximizing the use of existing facilities; finding new business opportunities; searching out and applying new technology and processes; expanding in Ontario and establishing new production facilities.

Qualified industrial development officers welcome opportunities to describe the activities, services and programmes designed to assist the businessman planning new operations or undertaking modernization, expansion or product diversification programmes.

Industrial Locations

Telephone: (416) 965-5711

Industrial development throughout Ontario is promoted and supported by services to companies and individual investors. Those planning new manufacturing establishments or expansions to existing facilities are assisted in their feasibility studies by the provision of information on:

- Industrial sites and municipal data
- Market studies
- Financing and methods of incorporation
- Income and realty taxes
- Federal and Provincial programmes and regulations
- Availability and cost of utilities, services and transportation
- Labour availability and labour rates
- Selective personnel recruitment
- Pollution control regulations
- Sourcing of raw materials
- Customs duties
- Building availability and costs
- Other data required by an industry when choosing the location best suited for its operation

Services to Municipalities

Qualified industrial municipal development consultants help municipal councils and industrial commissions in their industrial development objectives and efforts. Consultations, visitations and seminars are arranged to provide guidance on organization, development of industrial areas, preparation of industrial and community data and promotional techniques.

Municipal officials wishing to establish or improve their industrial development programmes are invited to make use of these services.

Manufacturing Arrangements

Telephone: (416) 965-5491

Qualified consultants work with established industry to find new business opportunities in order to fully utilize production facilities and to maintain or increase the employment of people. This service is provided by programmes which locate new products, processes and sub-contract work and introduce them to Ontario manufacturers.

Manufacturing Opportunities Bulletin

A bulletin is distributed monthly to some 5,000 registered Ontario manufacturing companies. Companies from all parts of the world who wish to have their products made and sold by Ontario companies or who seek contract suppliers of materials and components, are invited to list their requirements in the bulletin. Ontario companies use the bulletin as an effective means of identifying such manufacturing opportunities and for publicizing excess production capacity they have available.

The bulletin is comprised of five sections as follows:

- Joint Venture
- Licensing Arrangements (Products and Processes)
- Inventions
- Production Facilities Available
- Contracts Available

Joint Ventures: Domestic and foreign companies wishing to establish production and sales facilities in Canada on a Joint Venture basis may list their interests in this section of the bulletin at no charge. By regular examination of the bulletin, Ontario manufacturers, interested in pooling their resources of capital, labour, technical know-how, production facilities and marketing experience, will find opportunities for investment and product diversification.

Licensing Arrangements: In the Products and Processes section of the bulletin, companies may list items available for production on a licensing basis. By reference to the bulletin, Ontario manufacturers will find new profit opportunities through the addition of new product lines.

Inventions: By listing descriptions of their patented items or caveat protected ideas, inventors are introduced to suitable Ontario manufacturers.

Production Facilities Available: Ontario manufacturers with excess production capacity may list specific details of their equipment and capabilities for the attention of companies in need of additional production sources.

Contracts Available: Companies seeking sources of custom materials or components from Ontario manufacturers are invited to publish their requirements. This section of the bulletin receives the constant attention of reliable suppliers.

Product Prospecting Missions

Missions are conducted to selected industrial expositions in the highly developed centres of the world. Manufacturers seeking product diversification through licensing and joint venture arrangements are invited to inquire into the details of this effective programme.

Manufacturing Opportunity Days

For the convenience of manufacturers, this programme is conducted at various municipalities throughout the Province to introduce new business opportunities to Ontario industry. Appointments are prearranged for company representatives to consult directly with industrial development officers and review some 1,000 new product files. The current schedule of Manufacturing Opportunity Days is available on request.

Technology Services

Telephone: (416) 965-7196

A specialized staff of engineering-manufacturing consultants is available to assist companies in their efforts to acquire and apply new technologies on an industry sector basis. Companies planning modernization programmes or experiencing production problems can arrange for in-plant consultations or participation in the following programmes.

Technology Seminars

Product Development Clinics: These are scheduled in various communities throughout the Province. Local industrialists are provided with an opportunity to take part in group sessions and private interviews with selected consultants to cover such subjects as product design and diversification, new materials, industrial engineering, production methods and marketing.

Low Cost Automation Seminars: The seminars are held in conjunction with selected educational institutions to assist companies to improve productivity through automation at relatively low cost.

Industry Sector Seminars: Consultants organize specialized seminars to provide forums where industrialists and trade associations may meet with representatives from universities and government agencies to discuss new technological developments and their applications.

Industrial Technology Missions

Ontario industrialists wishing to study and evaluate the latest in products, production and processing technologies in other countries, many apply for participation in these missions. The programme is organized for several industry sectors each year and includes visits to expositions and conferences with tours of selected industrial plants.

Service Industries

Telephone: (416) 965-5711

The rapid expansion and diversification of the Ontario economy has stimulated a need for a wide range of services; particularly those sophisticated services required by business management and manufacturing operations.

Companies or individual investors wishing to investigate opportunities are invited to discuss their proposals with qualified consultants.

Financial Assistance

Through the Ontario Development Corporation, the Northern Ontario Development Corporation and the Eastern Ontario Development Corporation, the Government of Ontario provides financial and advisory services to businesses in the fields of manufacturing or services closely allied to manufacturing. Loans are tailored to meet a variety of business development requirements in locations and situations where financing is often not available from conventional lending institutions. Examples of the various types of term loans are:

- loans to small Canadian-owned businesses
- venture capital for Canadians
- industrial mortgages and leasebacks
- pollution control equipment loans

To encourage industrial development in selected areas of the province, special incentive loans may be considered for ventures that conform to Ontario's industrial develop-

ment policies and will contribute substantially to the economic development of the area.

Ontario Development Corporation:

Mowat Block, Queen's Park,
900 Bay Street,
Toronto, Ontario M7A 1T5

Timmins, Ontario
Telephone: (705) 264-1323

Research Services

Telephone: (416) 965-7290

Research services for Ontario businessmen include the compilation of marketing information for persons interested in establishing or expanding operations in Ontario. Continuing research is carried out on product diversification

possibilities and selected in-depth studies of specific Ontario industries are developed. Reports are available on the Automotive, Pulp and Paper and Furniture Industries.

Up-to-date data of a general and specific nature are provided from a wide range of statistical sources on request.

Industry Information Centre

Telephone: (416) 965-3365

Articles, books and periodicals are collected on subjects ranging from new technologies to international trade. The centre is available for business research and specific information may be obtained by personal visits or by telephone or mail inquiries.

The Centre also maintains a Directory of Ontario Associations (1972) and a Directory of Canadian Trade Directories for use by the general public.

Ontario Research Foundation

Telephone: (416) 822-4111

With grants from the Ontario Government and with funds from its contract work, the Ontario Research Foundation undertakes research projects for both large and small industries and for government. All work is confidential. Research and development services are provided in nine fields of science.

Ontario Field Offices

To assist Ontario businessmen and municipal officials throughout the Province, the Ministry maintains regional and district offices. Qualified staff consultants are prepared to discuss business and community needs and the application of the various services outlined in this brochure.
